The figure displays two phylogenetic trees based on 10 microsatellite loci, showing the relationships between 22 populations of the Japanese yew (*Taxus japonica*). The populations are numbered 1 to 22, corresponding to the list on the right. The left tree is rooted at node 15, and the right tree is rooted at node 17. Both trees show bootstrap values at the nodes and are divided into four groups (A, B, C, D) indicated by boxes.

Figure 1 displays three phylogenetic trees (A, B, and C) showing the relationships between 18 accessions of the genus *Aconitum*. The trees are rooted at the bottom. The scale bar represents 0.05 substitutions per site.

Tree A (Left): Shows relationships between 18 accessions. The scale bar is 0.05. The accessions are listed on the right, and their corresponding numbers are on the left.

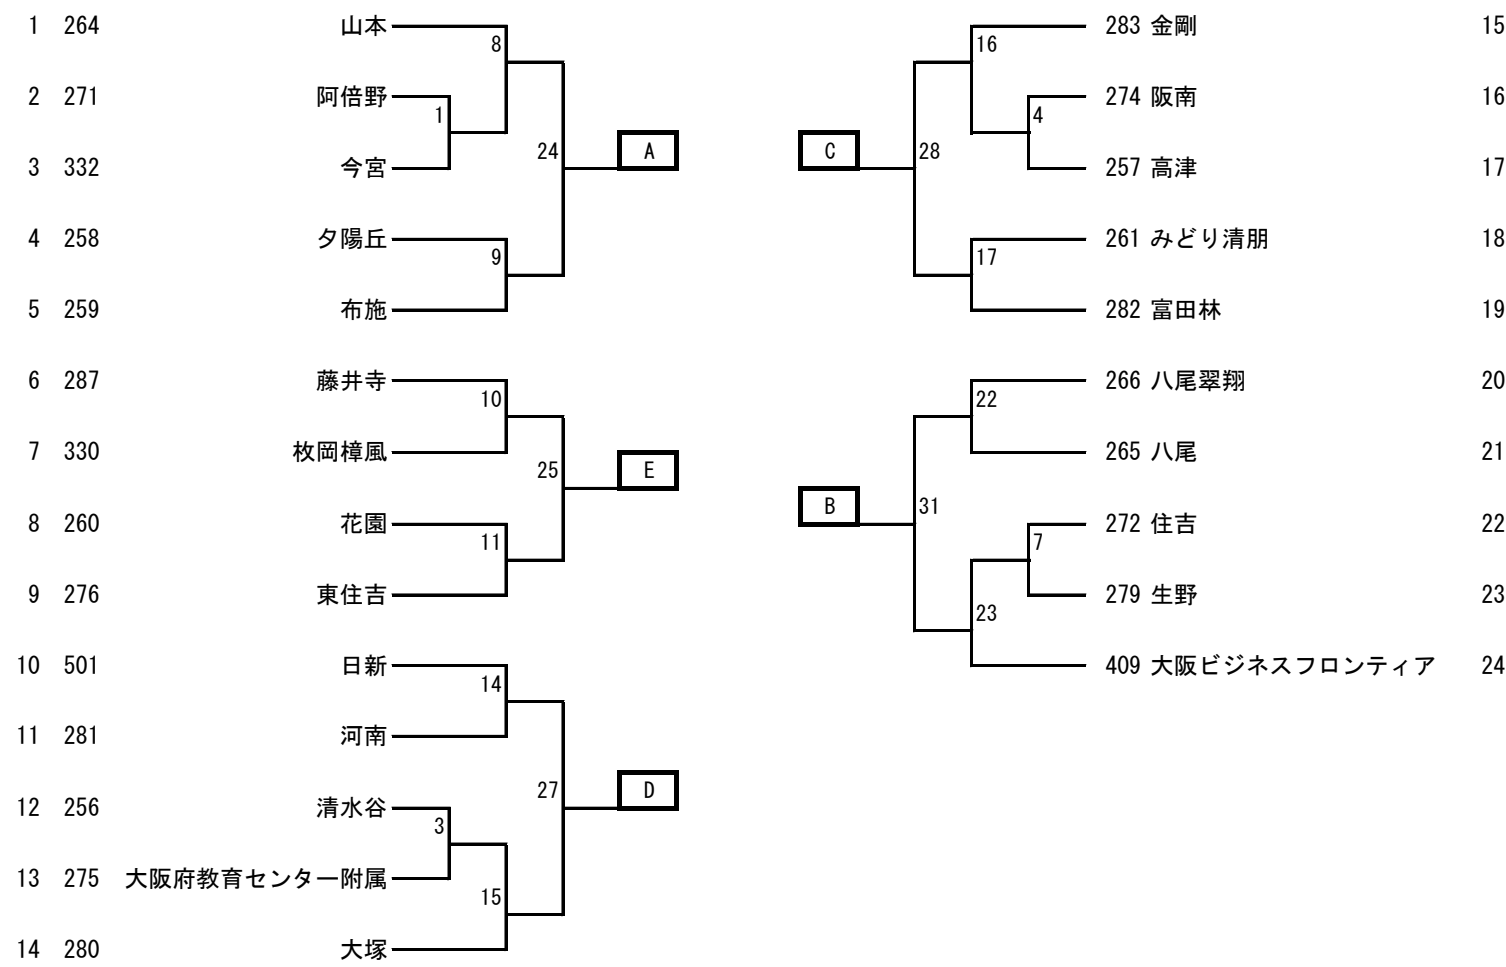

Tree B (Middle): Shows relationships between 18 accessions. The scale bar is 0.05. The accessions are listed on the right, and their corresponding numbers are on the left.

Tree C (Right): Shows relationships between 18 accessions. The scale bar is 0.05. The accessions are listed on the right, and their corresponding numbers are on the left.

The accessions and their corresponding numbers are:
